

## Innovation in Radio Automation

OMT iMediaPortal is a newly designed web access portal that enables secure, remote user access to a station's Enterprise SQL CMS.

Authorized web users can search, browse, play and download media. System administrators can manage user and group access.

The screenshot shows the iMediaTouch Enterprise web portal interface. At the top, there is a navigation bar with tabs for Library, Import, Station Info, Station Logs, Transactions, and Administration. Below this, the status of two stations is displayed:

**WIN8\_NT : Online**

<b>Status</b>		<b>Next to Play</b>
